DETAILED ACTION

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: The claimed "..so that water flowing in the third flow passage from the inlet port creates a venturi effect urging water within the second flow passage to flow toward the outlet port. .." recited e.g., in claim 1 is not positively recited in the specification. See also claims 11 and 14.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 & 4 –10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Angelos (5,881,763).

Angelos is applied for the same reasons as set forth at the paragraph bridging pages 2-3 of the previous Office Action.

Claims 3 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 14-16 and 18-21 are allowable over the prior art of record.

Applicants' arguments filed January have been fully considered but they are not persuasive.

Applicants' arguments such as: "...In Angelos, there is no teaching or suggestion that a particular arrangement of fluid passages would produced any sort of effect in one of the other passages. The passages of Angelos are shown as being perpendicular to each other and there is no teaching or suggestion that an alternative arrangement of the axis of the passages might be desirable. Without such teaching or suggestion, there can be no teaching of an arrangement of the second and third passages to create a venturi effect to urge water to move within the second passage. The only effect created by the arrangement of the passages as shown and taught in Angelos is a simple displacement of water.." are not persuasive of patentability for the following reasons:

Angelos teaches the claimed second and third passages and them being connected as claimed. Giving claim 1 its broadest reasonable interpretation, the perpendicular (right angle) of Angelos can read on the broadly claimed "shallow angle" (the term shallow is relative). Moreover, the argued creating a venturi effect such that water moves within the second passages is deemed naturally happening in the system of the prior art, since the prior art water also flows toward the drain outlet port (not a mere displacement). See col. 6, lines 15-23. The mixer system of Angelos with its constricted throat will naturally or inherently create a venturi effect as the fluid traverses the mixer tube. Nonetheless, Angelos' apparatus is not distinguished from the claimed invention with the recitation of the argued creating a venturi effect which is more process, not the basis for patentability of an apparatus claim.

Thus, in the absence of unexpected results, a prima face case of obviousness has been reasonably established by the prior art and has not been rebutted.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
